appiled: What did you change in it? And from where? appiled: is your kernel version less than 2.6.27-11? livingdaylight: no  
livingdaylight: it does have a 12.04 disk for upgrading mike\_t: Find your PS. sudo apt-get install pastebinit # Then, launch  
'pastebinit /etc/X11/xorg.conf' and send the url back to us. leaf-sheep: how can i tell if my kernel is less than 2.6.27-11? Okay.  
I'm trying to get my wireless card to connect to my wireless router. I get an error "invalid password" from windows XP on the  
same computer as ubuntu. I have a broadcom BCM4306 and I have been following this leaf-sheep: and why do you need  
Xorg.conf.new anyway? appiled: uname -r will tell you I've done a lot of research but can't figure it out leaf-sheep: i mean, i've  
never had any kind of problem or X glitch that i've noticed maco: i am running that proccess but nothing happens. i should see  
he is speaking with someone in ubuntu chat now? leaf-sheep: i dont know what i changed I keep getting "unknown hardware" on  
my broadcom card. I have the usb device plugged in right now jilttil: yes appiled: use uname -a to list the kernel version hi all,  
have a problem with dns, please give me a quick look, I run this command in console: `sudo dnsdomainname` and it gives me an  
list of my nameservers, but when I ping them I only get one response, other people are pinging all of them and getting responses
